

## **scope**

test out the whole workflow of the website  
and figure it out if it is intuitive or not

## **purpose**

uncover problems in the design  
discover opportunities to improve the design  
learn about users (behaviour and preferences)

## **location**

remote

## **participants**

facilitator: tudor  
users: stephen

## **scenario**

### **Introduction:**

hello [name], thank you for being part of this usability testing. This usability test contains a few questions and some tasks I would like you to perform. Are you ready?  
\*yes\*

First of all, I would like you to open this website, take a look for 5 seconds to the index page and then close it up.

### **Pre-task questions:**

What is your first impression of the website?

What do you think this website is for?

### **Tasks:**

"Imagine you would like to find out more about the user's website. How would you proceed?"

"Let's say that you want to see the analysis content for "Personal project" section and then go back to the main page. How would you approach that?"

### **Post-task questions:**

What caught your interest at the first look?

Was anything out of place? Is there something you didn't like about the design?

Were there something that you liked specifically about the design?

What things would you suggest that needs to be improved?

### **Ending words:**

Thank you, [name], for being part of this usability testing.
